Fischer Panda Marine Generators
Fischer Panda GmbH manufactures compact and quiet diesel generators for marine and vehicle applications. These are sold in over 80 countries worldwide under the trade name “Fischer Panda”.

The water-cooled diesel generators from Fischer Panda are renowned worldwide for being innovative, reliable and extremely quiet. The product range includes over two hundred different generators for performance ranges up to 200 kW.

Fischer Panda generators feature an effective water-cooling system and a lightweight compact construction. This ensures Fischer Panda is one of the leaders for mobile super-silent diesel generators. These highly-proven marine and vehicle generators supply power to electrical systems, electric drives and complete mobile energy systems.

You will always have sufficient power with a Fischer Panda generator

- Generator systems from 3 kW to 200 kW
- Worldwide partners near you
- Very low vibration and quiet installation
- Up to 40% weight and 60% space savings possible
- Parallel operation with multiple generators
- Integration with yacht’s main control systems

Fischer Panda has manufactured more than twenty-five thousand marine generators since 1988 with this technology. One of the reasons for the superior efficiency of Panda generators is the very effective cooling system, it ensures that the temperatures inside the sound insulation capsule remain within an acceptable range even in tropical conditions at the same time achieving the best possible sound insulation as free-flowing cooling air is not required.

Dual cooling system of Fischer Panda generators

Fischer Panda has manufactured more than twenty-five thousand marine generators since 1988 with this technology. One of the reasons for the superior efficiency of Panda generators is the very effective cooling system, it ensures that the temperatures inside the sound insulation capsule remain within an acceptable range even in tropical conditions at the same time achieving the best possible sound insulation as free-flowing cooling air is not required.

- Water-cooled windings
- Dual-circuit cooling
- No appreciable warming of engine room

Seawater with high salt content and tropical temperatures increase the danger that metal can be affected by galvanic corrosion (Electrolysis). Even a very small current can have a destructive effect. To prevent this, Fischer Panda uses dual-circuit cooling for generator and engine on all Panda generators from 3.2 kW upwards. The engine and generator are cooled by freshwater. Seawater only comes into contact with the heat exchanger, which is manufactured from a high quality alloy (CuNi10Fe).

“Power - wherever you are” with Fischer Panda

Our worldwide distributors and partners are able to help you choose the best generator for your requirements.
High performance AC windings from Fischer Panda

**Single-phase windings**

The 230 V 50 Hz, (120/240 V 60 Hz) single phase windings are standard for generators up to 25 kW. A three-phase version should be considered above 12 kW, as the Panda generator permits asymmetrical loads up to 50 % per phase. A Hybrid Power System should also be taken into consideration for small to medium range on-board power systems.

**Three-phase windings**

The 400 V AC 50 Hz, (208 V 60 Hz) three-phase winding has the highest level of efficiency and the best qualities. This winding can also supply single-phase AC with the appropriate phase distribution. A three-phase generator should always be chosen above 25 kW (from Panda 30).

Reliable and durable

The asynchronous generator delivers high standards regarding both operational security and life. The asynchronous generator is often the preferred choice when a high degree of safety and reliability is demanded. Fischer Panda warrants the rotor, often the most sensitive part of other generator systems, with a lifetime guarantee. Furthermore, the asynchronous generator continues to be the best suited for water-cooling as the copper winding is the only component producing heat via the stator. The electrical generator is warranted with a 5-year guarantee against corrosion.

“Perfect Power” iSeries generators

The Panda iSeries generators have been especially designed to be compact, quiet and powerful with up to 30 % weight and space savings! They are ideal for superyacht owners looking for a night generator with low operating sound levels and vibrations. The generators are characterised by their modern, innovative and environmentally friendly inverter technology. iSeries generators using parallel inverters can be connected in parallel without any additional cables and synchronised.

The speed of the diesel engine is adjusted according to the user’s changing power requirements while the output voltage always remains constant from the inverter. Variable speed control considerably reduces exhaust emissions and fuel consumption in comparison with a traditional generator with a fixed speed. The maximum speed of the engine is 2800 RPM. The electric load is provided with a constant output voltage of 230 V / 50 Hz or 400 V / 50 Hz via an inverter.

All the benefits of the asynchronous generator:
- Overload protection
- Water-cooled
- Short-circuit stability
- Highest operating protection
- High protection rating
- Brushless
- Perfect sine wave
- No rotating coils
- No diodes
- Precise control
- No signal noise
- Highly efficient

“Compact Power” generators

**Basic Line: Fischer Panda generators without electronic regulation**

These Panda generators are ideal for those interested in a favourable price. Basic Line generators are not fitted with electronic speed control. Other major parts: motor, generator, sound insulation casing, and water-cooling are identical to Premium Line models. The voltage tolerance lies within an acceptable range of ±8 % (similar to a shore power connection).

**Premium Line: Fischer Panda generators with xControl**

The “xControl” management system offers an easy to operate system, a modern and simple system architecture and a modern communication interface. It replaces the current VCS control on Fischer Panda asynchronous generators. Modern data communications and energy systems require that the generator is able to integrate with an existing control and regulation system. With the “xControl”, Fischer Panda offers an extremely powerful and user-friendly generator control system. Through intelligent communication of three main system components (digital panel, connection box and control unit), a reliable operation of the generator is ensured.

“Hybrid Power” generators (AC indirect)

**AGT-DC Line: Fischer Panda battery charging generators**

Fischer Panda battery charging generators produce direct current and generally function as part of a Hybrid Power System. Battery levels are monitored and automatically charged by the generator. An inverter supplies energy to the 230 V consumers on-board. These systems are ideal for typically varying power demands which do not require a generator to constantly run throughout the day.
Innovative generator control

Innovative, flexible and reliable - these are the attributes of the new generator control from Fischer Panda for "Perfect Power" iSeries generators and "Compact Power" xSeries generators up to 30 kW. In the age of modern data communications and energy systems, it is more and more important that the generator is able to integrate with an existing control and regulation system. Fischer Panda offers an extremely powerful and user-friendly generator control system:

- "Plug & Play" - reduced installation effort
- Modular system - easy to expand
- Logging and display of operational data - complete control at all times
- Comprehensive event logging - long term service
- Digital panel - easy to use and multilingual
- Communications interface - integration in other control systems
- Self-test of all functions - safe and reliable system
- Automatic start - remote control of generator
- Fast control - stable energy supply

Perfect sine wave

The Panda combines all the advantages of the asynchronous generator with the voltage control of a synchronous generator. Asynchronous Panda generators supply a particularly clean sine wave and have achieved the best results during numerous tests in this category. This is essential for the smooth running of sensitive electronic devices such as air conditioners, charging devices, laser printers etc.

Voltage stability with Voltage Control System (VCS) tolerance ± 3V

Fischer Panda generators have used their own electronic Voltage Control System (VCS) for controlling generator and engine. The engine speed is progressively controlled. This ensures that the output voltage of the asynchronous generator has a tolerance of ± 3V.

SAEJ1939 CANBus Module for xControl / iControl

The Fischer Panda FP Bus provides 100 % SAEJ1939 functionality. This allows the generator to be integrated into a higher level control system. The generator can be remotely started and stopped. All electrical data can be accessed via the bus: voltage, current, frequency and power. Monitoring information such as cooling, exhaust and oil temperatures etc. can also be accessed.
**Fischer Panda “Perfect Power” iSeries generators with variable speed**

Generators with variable speed for reduced fuel consumption, quiet operation and less exhaust emissions.

Up to 50% less weight and 30% space savings when compared to asynchronous generators of the same class.

Panda iSeries marine inverter generators with variable speed technology:
- 50 Hz - 230V
- 50 Hz - 400V
- 60 Hz - 120V
- 60 Hz - 230V
- 60 Hz - 2 x 120V / 240V

variable speed - load dependent

The data in this publication reflects the technical state at time of print. Due to our policy of continual product development, we reserve the right to alter technical specifications without notice. Dimensions apply for the sound insulation capsule only and do not include latches, fittings etc. Additional room will need to be calculated for the installation to include hoses, cables and capsule mountings. Please confirm current dimensions and weights when ordering.

*NOTE:* For asynchronous generators up to and including Panda 15000, the KVA is calculated with cosPhi = 0.85 for a short starting performance of inductive consumers. Otherwise it should be calculated with a factor of 1. Generators above and including Panda 16 with an optional start performance with compensation or starting-current booster are calculated with cosPhi = 0.85 otherwise it should be calculated with a factor of 1.
**Fischer Panda “Hybrid Power” DC generators**

1) The performance of an AGT-DC generator must be limited to the constant performance when batteries are used.

Dimensions apply for the sound insulation capsule only and do not include latches, fittings etc. Additional room will need to be calculated for the installation to include hoses, cables and capsule mountings.

Dimensions reflect the technical state at time of print. Due to our policy of continual product development, we reserve the right to alter technical specifications without notice.
The xControl PD-A (Parallel Device) module allows two Fischer Panda xControl AC generators to be connected in parallel. Electrical loads can be switched from one generator to another (uninterrupted) or their outputs can be combined (load sharing).

The PD-A is connected to each generator’s data bus. The generators are set to “parallel-mode” via the xControl display menu. The PD-A monitors both generators and synchronises their output. The load is switched from one generator to the other when their outputs are synchronised. Both single and three phase generators can be connected in parallel using the PD-A module.

Load transfer for Fischer Panda generators with xControl

“Plug and play” load switching using xControl

The xControl PD-A (Parallel Device) module allows two Fischer Panda xControl AC generators to be connected in parallel. Electrical loads can be switched from one generator to another (uninterrupted) or their outputs can be combined (load sharing).

The PD-A is connected to each generator’s data bus. The generators are set to “parallel-mode” via the xControl display menu. The PD-A monitors both generators and synchronises their output. The load is switched from one generator to the other when their outputs are synchronised. Both single and three phase generators can be connected in parallel using the PD-A module.

High performance solution for even more comfort and safety

Optional available parallel inverters can be used to easily connect several iSeries generators of different types in parallel. Extra cables or additional cabinets are not required. Each generator is fully independent and can be individually operated.

• Multiple generators can be easily connected in parallel - even if they have different outputs using “parallel“ inverters (optional).
• Load-Sharing: both generators are equally loaded when operating in parallel.
• Ideal for applications such as multihulls which may benefit from installing various smaller generators to improve weight distribution.

Parallel power from Fischer Panda generators

Fischer Panda Parallel “iSeries“ generators

All generators with xControl can operate in parallel
The Fischer Panda Automatic Transfer Unit monitors the presence of AC shore power. If the shore power supply is not available, the AC Generator is automatically started. As soon as the shore power supply has been restored, the power can be manually switched back (if required) and the AC generator can be stopped.

Automatic transfer from shore power to Fischer Panda generator

Automatic transfer if shore power fails

The Fischer Panda Automatic Transfer Unit monitors the presence of AC shore power. If the shore power supply is not available, the AC Generator is automatically started. As soon as the shore power supply has been restored, the power can be manually switched back (if required) and the AC generator can be stopped.

Fischer Panda Warranty Plus

More security and peace of mind with your Fischer Panda generator

What is the extended Fischer Panda Guarantee?

The extended Fischer Panda Guarantee™ is a component of the generator warranty. Once accepted, it applies up to the first inspection/interval service and extends thereafter automatically up to the respective next inspection/interval service at a Fischer Panda Service Partner but not beyond the specified date on the certificate of guarantee.*

Fischer Panda generators are issued with a Basic Guarantee.

The Basic Guarantee™ is free of charge for you and applies generally from the date of delivery by Fischer Panda provided that regular and proven maintenance with original Fischer Panda parts has been carried out.*

**) The above listed guarantee/warranty packages are only available for Fischer Panda marine and commercial vehicle generators.

Commercial usage 1 year or 1000 operation hours *)

Private usage 2 years or 1000 operation hours *)

The Basic Guarantee™ also provides for an additional 5 years from the delivery date for electrical parts of asynchronous generators (stator with winding, alternator housing, sealing and all water-bearing parts). This extended warranty covers damage caused by cooling water to the above mentioned parts. An additional 10 years’ guarantee on the rotor from the date of delivery is also included.**

Options for buyers of Fischer Panda generators whereby the previous owners did not follow the specified service intervals.

Under certain circumstances, a “1250 Refit” warranty may be considered and granted for owners of a used Fischer Panda Generator.

Further information:

www.fischerpanda.de

*) Please consult the Fischer Panda Warranty Plus for the exact requirements and conditions for Extended Warranty, Guarantee and Warranty packs. Furthermore, the general Guarantee Conditions for mobile and stationary Fischer Panda generators apply.

**) The above listed guarantee/warranty packages are only available for Fischer Panda marine and commercial vehicle generators.

1) Whichever comes first.
Installation and custom services by Fischer Panda

Installation kits
Fischer Panda supplies installation kits with all the necessary cables, hoses, connection pieces and accessories to ensure that the system can be correctly installed in a yacht’s engine room, catamaran’s hull or inside a vehicle. This even includes specific hose and cable lengths.

Custom services for special requirements
Fischer Panda offers a wide range of services for customising and adapting generators for use with special equipments and commercial applications. This includes electric-magnetic hydraulic couplings to drive mechanical hydraulic pumps and mounting slides to access the generator for service purposes.

Powerful energy systems
Fischer Panda marine generators form the backbone of our intelligent and innovative system solutions. These ensure you have sufficient energy even when there is no shore power connection available. It is possible to enhance an existing installation and interface with the yacht’s control system.

Service and support for Fischer Panda customers

Service kits
Fischer Panda Service Kits include only original spare parts which meet their required specifications. The Fischer Panda service kits are suited for the type of servicing normally carried out by workshops.

Fischer Panda Service Plus Kits include only the original spare parts which meet their required specifications and all the relevant spare parts for the first 600 h service intervals. Service Plus kits are supplied in a handy waterproof plastic box so all the items are protected while storing.

The Fischer Panda Installation Guide can be downloaded from the company website at: http://www.fischerpanda.de/installation

Global Service Directory
With a coordinated network of distributors, dealers and service stations, Fischer Panda has trained specialists and a worldwide dealer network ready to help, advise and recommend the best service station depending on your location of your vehicle or yacht. They will also be able to organise and coordinate resources and parts so we can provide you with the best service - wherever you are.

The Global Service Directory can be downloaded from the company website at: http://www.fischerpanda.de/globalservice

Fischer Panda SOS-24/7 hotline
In case of a generator failure or urgent enquiries of any kind outside our normal business hours you can ring the Fischer Panda switchboard on +49 5254 9202-767 (SOS on a key-operated telephone). Please leave your name, number and the purpose of your call on the answerphone/voicemail. This customer service is operated around the clock by employees at Fischer Panda.
Disclaimer:
The information contained here is to the best of our knowledge accurate at the date of publication. Please note that the data in this publication reflects the technical state at time of print. Dimensions apply for the sound insulation capsule only and do not include latches or fittings etc. Additional room will need to be calculated for the installation to include hoses, cables and capsule mountings. Additional components or alternators may also affect capsule dimensions. Due to our policy of continual product development, we reserve the right to alter technical specifications without notice. All performance data relates to air and water temperatures of 20 °C. Performance reduction (approx. 1 % per 100 m height and approximately 2 % per 5 °C air temperature and approximately 1 % per 1 °C water temperature above 20 °C)
