Fischer Panda iSeries marine generators for yachts

with variable speed technology (5 - 15 kVA)

Fischer Panda iSeries generators have been especially designed to be compact, quiet and powerful - with up to 30 % weight and space savings! They are ideal for yacht owners who require low operating sound levels and vibrations. The generators are characterised by their modern, innovative and environmentally friendly inverter technology.

The speed of the diesel engine is adjusted according to the user's changing power requirements while the output voltage always remains constant from the inverter. Variable speed control considerably reduces exhaust emissions and fuel consumption in comparison with a traditional generator with a fixed speed. The maximum speed of the engine is 2800 rpm. The electric load is provided with a constant output voltage of 230 V / 50 Hz or 120 V / 60 Hz via an inverter.

- Small size and low weight - compact installation
- Highly efficient - maximum energy
- Variable speed - load-dependent
- 230 V AC output - reliable power supply
- Pure sinus wave is ideal for sensitive electronics
- High starting capacity for air conditioners / compressors
- Easy to install - no forced air circulation required in machine room
- Environmentally friendly - low fuel consumption
- Optional CAN SAE J1939 interface

The iSeries generators are fitted with the renowned Fischer Panda sound insulation and water cooling.

Parallel connected iSeries

High performance solution for more comfort and safety

Fischer Panda also offers Parallel-PMGi inverters as an option. This allows several iSeries generators of different types to be easily connected in parallel. Extra cables or additional cabinets are not required. Each generator is fully independent and can be individually operated.

- Multiple i-Series generators can be easily connected in parallel - even if they have different outputs (using parallel inverters - available as option)
- Load-Sharing: both generators are equally loaded when operating in parallel
- Ideal for applications (multihulls - catamarans, trimarans) which may benefit from installing various smaller generators to improve weight distribution
